

INTRODUCING Total Restroom Management

Our goal is to create the best possible restroom experience by providing a modern, hygienic, touch free environment.

Green Sky has developed an innovative new program called **Total Restroom Management (TRM)**. TRM will help improve your company's image and improve the health and well being of your employees, tenants and customers—and if that's not enough, it will help improve your company's bottom line.

We have a specific program for every type of restroom environment from traditional office buildings, to educational facilities, to high traffic public use facilities.

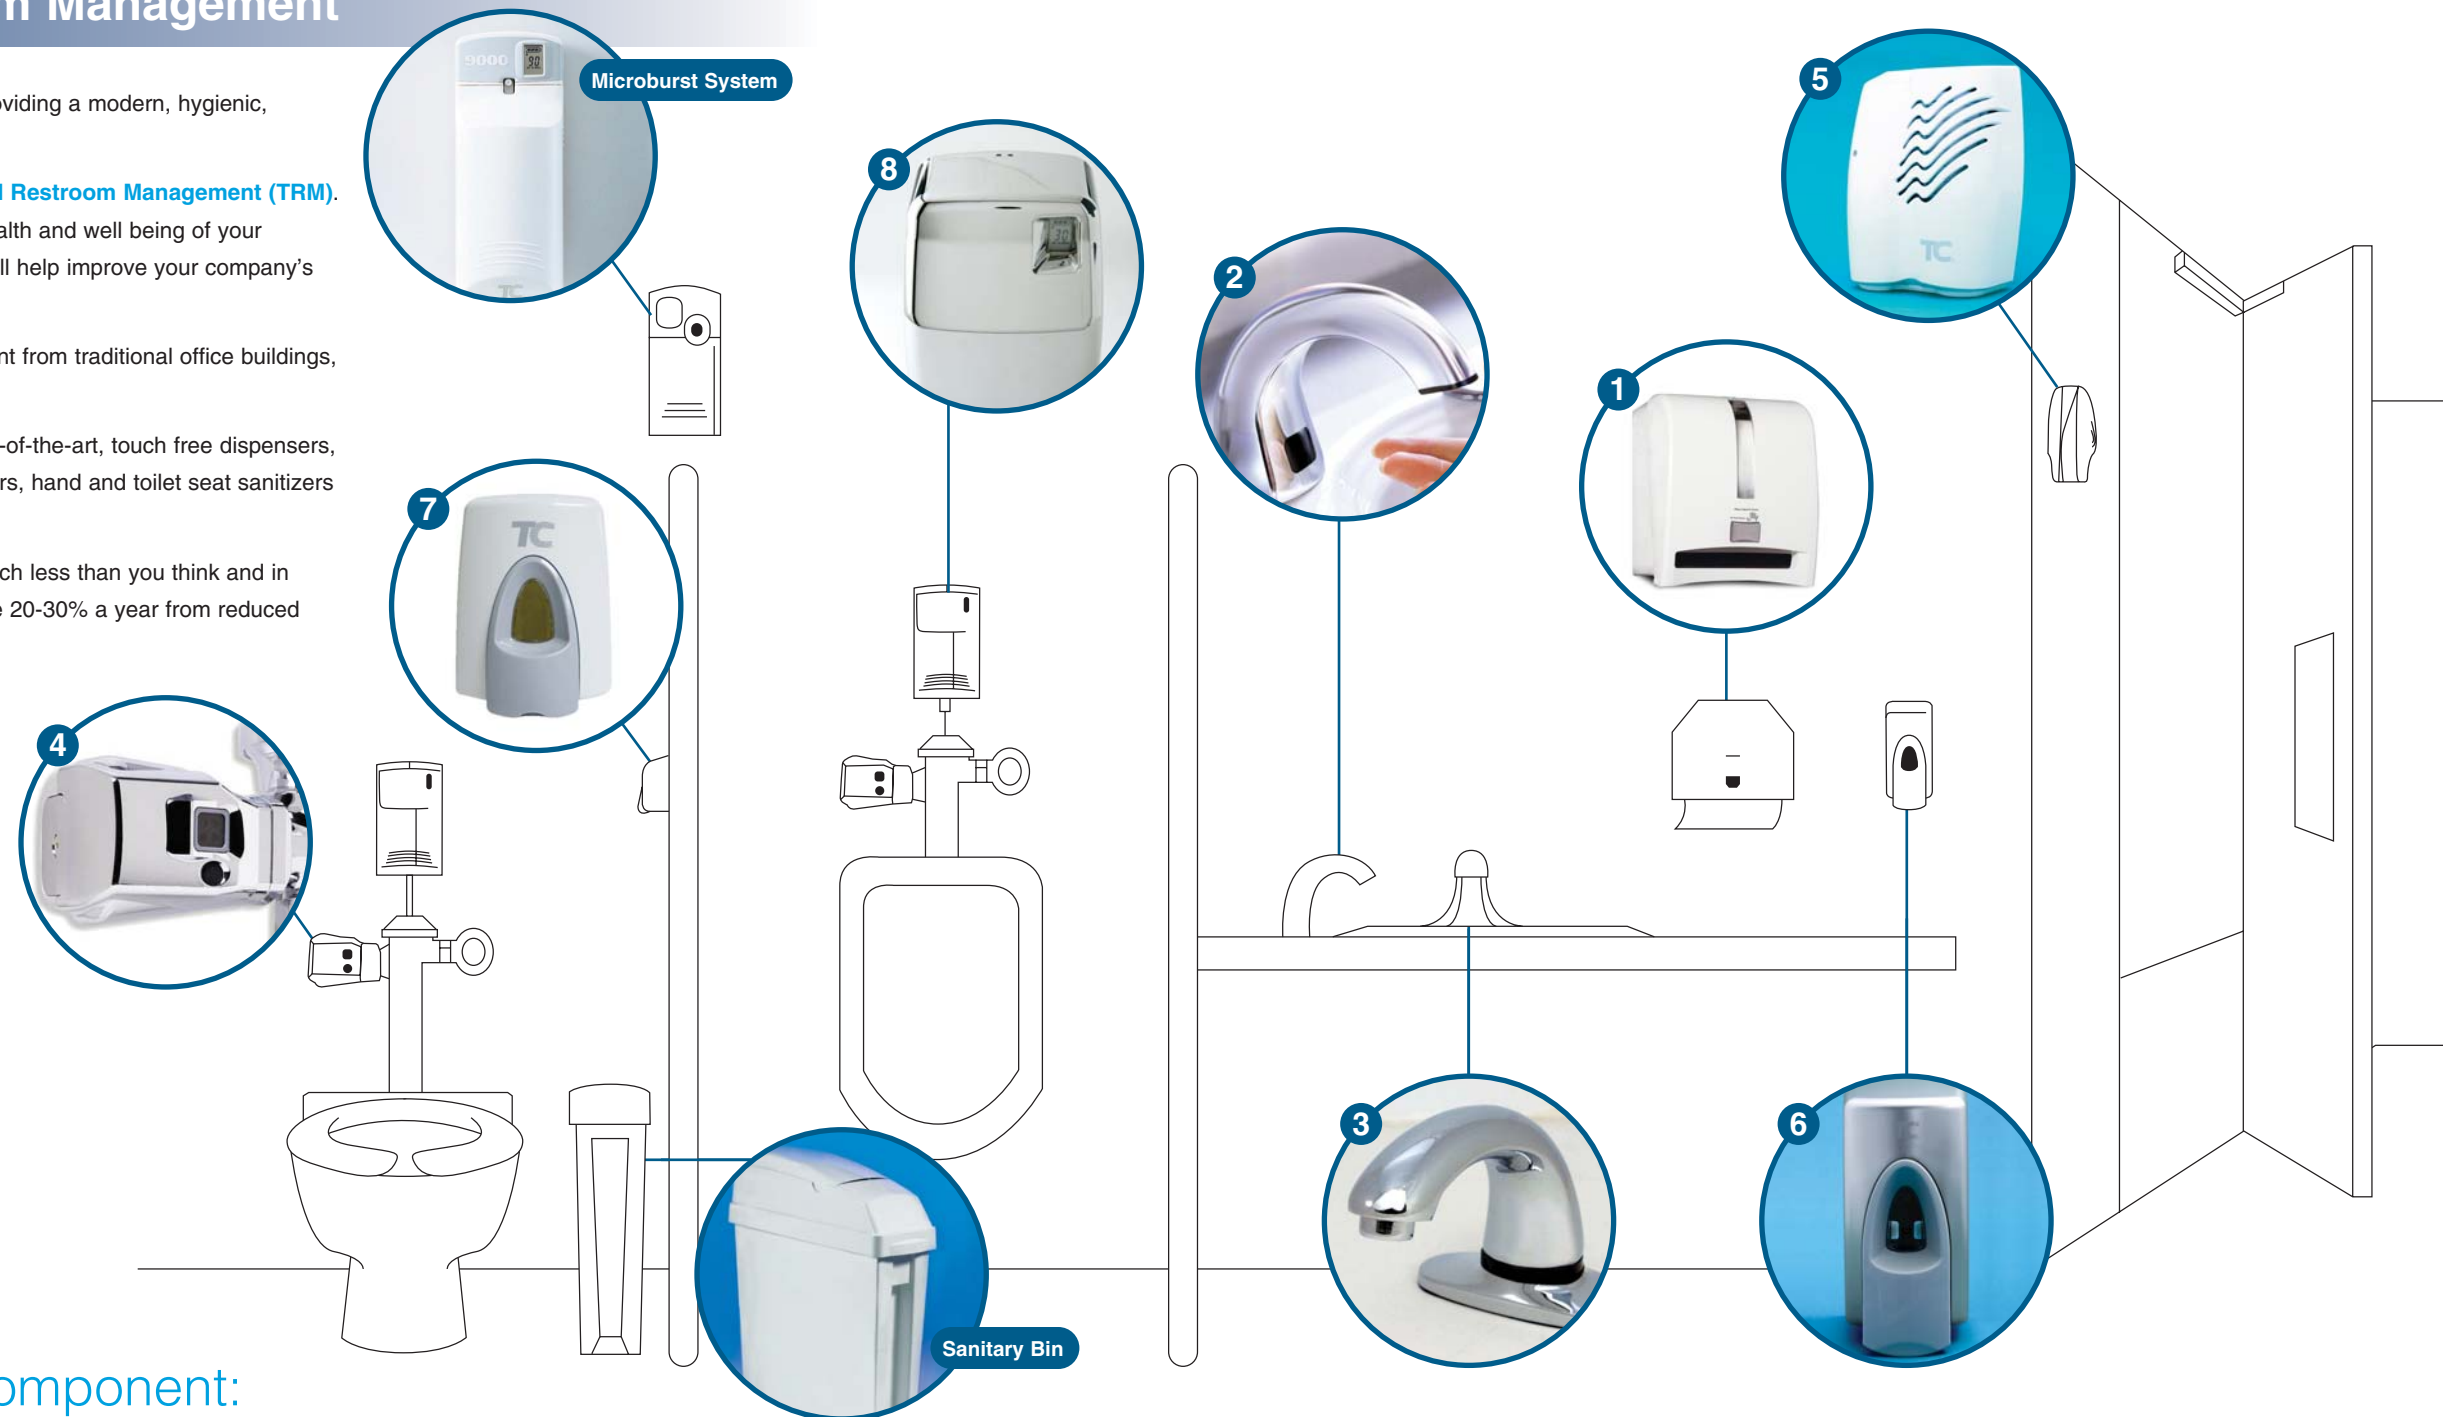

We replace those out-dated paper and soap dispensers with state-of-the-art, touch free dispensers, install air freshening systems, touch free faucets, automatic flushers, hand and toilet seat sanitizers and automatic urinal and toilet cleaners.

These components are easy to install and maintain. They cost much less than you think and in some situations they are free. Depending on use, you should save 20-30% a year from reduced paper, hand soap and water use.

Step One - Installation: Green Sky provides complete installation services from our friendly, well-trained installation technicians or we can work with your in-house maintenance staff. The process is easy and the components can be installed in a matter of minutes.

Step Two - Supplies: Green Sky provides you with the paper, soap, trash liners and air freshening cartridges at very competitive rates. We work with all of the major vendors to provide you with the solution that works best for your organization.

Step Three - Customer Service: Green Sky stands behind the products and we are there to support you on a consistent basis. We'll keep you updated on product innovations, green cleaning programs and ways to cut costs.

Benefits and Features by component:
